RAIsoft Product Concept

interRAI

The RAIsoft product concept is an **easy to use** and innovative solution for taking full advantage of the **interRAI assessment instruments** in care planning, quality monitoring and resource management in areas of elderly care, rehabilitation and mental health. RAIsoft is licensed to bring you the 20+ years of international research and experience from the interRAI group.

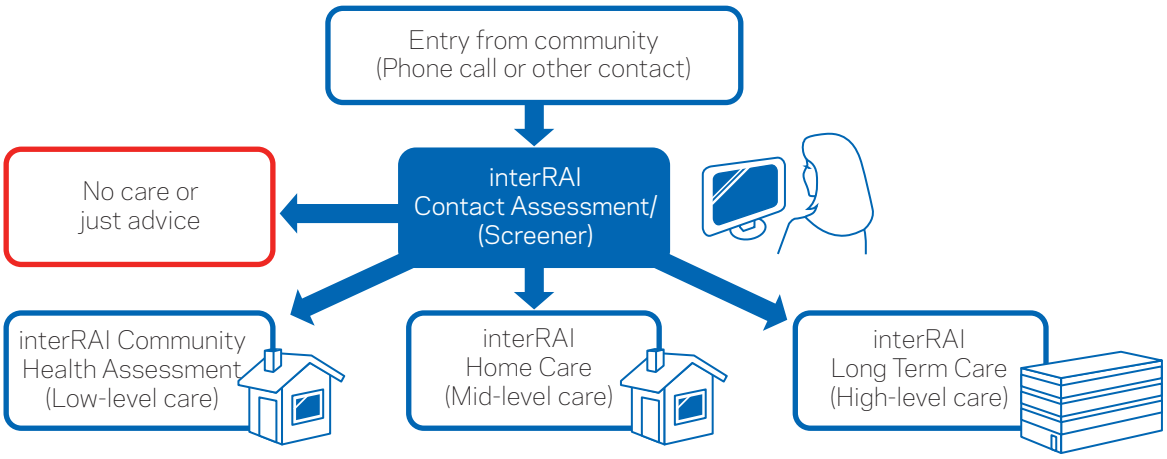
These assessment tools are:

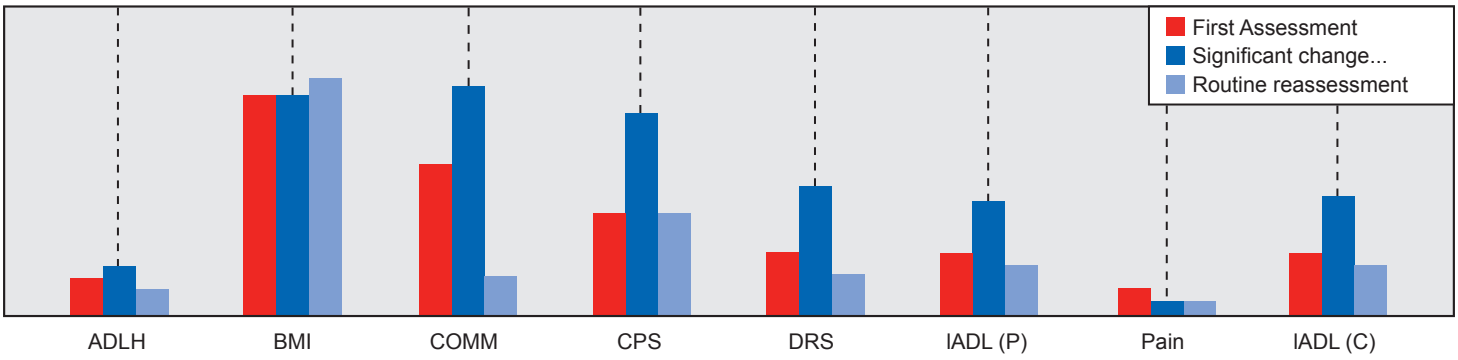
- The international 'gold star' in assessment and care planning
- Trialled and used in over 30 countries
- Efficient and very easy to use
- Proven to improve quality of care to older persons across a variety of settings
- Evidence based, valid and reliable tools
- Client focused for effective planning and care

From First Contact To High Level Care

RAIsoft provides a suite of assessment tools that ensures:

- A universal language across settings
- The right assessment, at the right place and right time
- A solution whereby assessment results can guide the client smoothly through the continuum of care





Something For Everyone

RAIsoft provides something for everyone from a **single** assessment:

Clinician

- A holistic 'gold star' assessment and care planning tool; reduced documentation; improved care planning; evidence based practice

Manager

- A tool for continuous improvement, quality monitoring, reporting and resource utilisation and planning, benchmarking with other services; improved productivity

Organization

- A tool for policy making, service quality monitoring, resource planning.

Following Client Progress

RAIsoft offers a range of reports such as:

- Client performance trended over time in areas of cognition, mood, activities of daily living, pain, communication and nutrition
- Group demographics, attributes, risks and other profiles

Evidence-Based Care

Each holistic assessment triggers potential areas of risk, screens for certain conditions and highlights issues that require further consideration. These assessment protocols provide evidence based guidance to assist with interpretation of results, care planning, referral and follow-up of client needs.
